## Plot Summary

The novel begins with a group of scientists arriving at the Hudson Bay coast. They are there to study the effects of DDT on the local wildlife. DDT is a pesticide that was widely used in the 1950s and 1960s to control insects. However, it was later discovered that DDT is harmful to wildlife, and it was banned in the United States in 1972.

The scientists soon discover that the Hudson Bay coast is a barren and desolate landscape. The trees are dead, the water is polluted, and the wildlife is gone. The scientists are horrified by what they see, and they realize that the DDT has had a devastating impact on the environment.

The scientists continue their research, and they eventually discover that the DDT has caused a number of problems for the wildlife. The DDT has caused the birds to lay eggs with thin shells, which makes them vulnerable to predators. The DDT has also caused the fish to develop tumors and other health problems. The scientists realize that the DDT is a threat to the entire ecosystem, and they know that they must do something to stop it.

## **Characters**

The novel features a number of characters, including:

- **Dr. Paul Queneau** is a scientist who is leading the research team. He is a dedicated scientist who is determined to find out the truth about the effects of DDT.
- **Dr. Louise Bannon** is a scientist who is working with Dr. Queneau. She is a compassionate and caring person who is deeply concerned about the effects of DDT on the wildlife.

- **Tommy Mack** is an Inuit guide who is helping the scientists with their research. He is a skilled hunter and trapper who knows the land well.
- **Johnny Eskimo** is an Inuit elder who is concerned about the effects of DDT on the wildlife. He is a wise and respected man who knows the importance of protecting the environment.
