# My Attempt At Breaking Into Tech During The Rise Of The Coding Boot Camp

I've always been interested in technology, but I never thought I could actually work in the tech industry. I didn't have a computer science degree, and I didn't know how to code. But then I heard about coding bootcamps, and I thought, "Maybe this is my chance."

Coding bootcamps are intensive, short-term programs that teach students the skills they need to get a job as a software developer. They're typically 12-16 weeks long and cost around $10,000.

I decided to enroll in a coding bootcamp in San Francisco. The program was tough, but I learned a lot. I learned about JavaScript, Python, web development, mobile development, data science, and artificial intelligence.

After I graduated from the bootcamp, I started applying for jobs. I didn't get any interviews at first, but I kept applying. Finally, I got an interview at a startup.
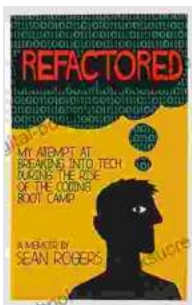

The interview went well, and I got the job. I'm now a software developer at the startup, and I'm loving it.

I'm so glad I decided to enroll in a coding bootcamp. It was the best decision I ever made. If you're interested in working in the tech industry, I highly recommend checking out coding bootcamps.

Here are some of the things I learned from my coding bootcamp experience:

* **Coding is not as hard as I thought it would be.** If you're willing to put in the work, you can learn to code. * **Coding bootcamps are a great way to learn the skills you need to get a job in the tech industry.** Bootcamps are intensive, but they're also very effective. * **The tech industry is a great place to work.** The tech industry is constantly evolving, and there are always new opportunities.

If you're interested in working in the tech industry, I encourage you to check out coding bootcamps. They're a great way to learn the skills you need to get a job, and they're a great way to break into the tech industry.
