

# My Mission to Clean Up the World's Most Life-Threatening Pollution

## The Invisible Killer

Air pollution is the world's most life-threatening pollution, causing an estimated 7 million deaths each year. It is a major risk factor for a wide range of health problems, including stroke, heart disease, lung cancer, and respiratory infections.

Air pollution is caused by a variety of sources, including vehicles, power plants, factories, and agriculture. It can be particularly harmful in cities, where traffic congestion and high levels of industrial activity can lead to high concentrations of pollutants.

## The Devastation of Air Pollution

The health effects of air pollution are devastating. In addition to the millions of deaths it causes each year, air pollution also contributes to a wide range of other health problems, including:

- Cardiovascular disease
- Stroke
- Lung cancer
- Respiratory infections
- Asthma
- Bronchitis
- Emphysema
- Chronic obstructive pulmonary disease (COPD)

Air pollution also has a significant impact on the environment. It can damage crops, forests, and water bodies. It can also contribute to climate change.

## **My Mission**

I am on a mission to clean up air pollution and protect human health. I founded Clean Air Now, a non-profit organization dedicated to developing and implementing innovative solutions to reduce air pollution.

Our work focuses on three main areas:

1. **Research:** We are conducting research to better understand the sources and health effects of air pollution. We are also developing new

technologies to reduce air pollution.

2. **Education:** We are educating the public about the dangers of air pollution and how they can reduce their exposure. We are also working to raise awareness of air pollution among policymakers.
3. **Advocacy:** We are advocating for policies that will reduce air pollution and protect human health. We are also working to hold polluters accountable.

## **Our Progress**

Since our founding in 2015, Clean Air Now has made significant progress in our mission to clean up air pollution. We have:

- Conducted research that has helped to identify the major sources of air pollution in cities around the world.
- Developed new technologies that can reduce air pollution from vehicles, power plants, and factories.
- Educated millions of people about the dangers of air pollution and how they can reduce their exposure.
- Advocated for policies that have led to reductions in air pollution in cities around the world.

## **Our Future Plans**

We are committed to continuing our work to clean up air pollution and protect human health. Our future plans include:

- Expanding our research to identify new sources of air pollution and develop new technologies to reduce it.

- Continuing to educate the public about the dangers of air pollution and how they can reduce their exposure.
- Advocating for policies that will further reduce air pollution and protect human health.

## Join Us

We need your help to clean up air pollution and protect human health. You can join us by:

- Donating to Clean Air Now.
- Volunteering with Clean Air Now.
- Spreading the word about the dangers of air pollution.
- Advocating for policies that will reduce air pollution.

Together, we can create a world where everyone can breathe clean air.
