The Black Sea Smart City is a visionary urban development project that aims to create a sustainable, resilient, and inclusive city of the future. The city is being planned with the latest smart technologies and innovative design concepts, and it is expected to serve as a model for other cities around the world.

The Vision for Black Sea Smart City

The vision for Black Sea Smart City is to create a city that is:

- **Sustainable:** The city will be designed to minimize its environmental impact and to use resources efficiently.
- Resilient: The city will be able to withstand natural disasters and other challenges.

 Inclusive: The city will be designed to be accessible and affordable for everyone.

The Planning Process

The planning process for Black Sea Smart City is being led by a team of experts from around the world. The team is working closely with local stakeholders to ensure that the city meets the needs of the community.

The planning process is divided into three phases:

1. Phase 1: Master Planning

2. Phase 2: Detailed Design

3. Phase 3: Construction

Phase 1 is currently underway and is expected to be completed by the end of 2023. During this phase, the team is developing a master plan for the city, which will outline the overall vision for the project and identify the key strategies for achieving it.

Phase 2 will begin in 2024 and is expected to be completed by the end of 2026. During this phase, the team will develop detailed designs for the city's infrastructure, buildings, and public spaces.

Phase 3 will begin in 2027 and is expected to be completed by the end of 2030. During this phase, the team will construct the city and its various components.

The Expected Benefits of Black Sea Smart City

The Black Sea Smart City is expected to have a number of benefits for the community, including:

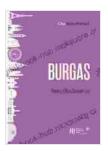

- Economic development: The city is expected to create new jobs and attract businesses to the area.
- **Improved quality of life:** The city will provide residents with access to better housing, healthcare, education, and other essential services.
- Reduced environmental impact: The city will be designed to minimize its environmental impact and to use resources efficiently.
- Increased resilience: The city will be able to withstand natural disasters and other challenges.
- **Enhanced social cohesion:** The city will be designed to be inclusive and accessible for everyone.

The Black Sea Smart City is a visionary urban development project that has the potential to transform the region. The city is being planned with the latest smart technologies and innovative design concepts, and it is expected to serve as a model for other cities around the world.

The planning process is underway and is expected to be completed by the end of 2030. The city is expected to have a number of benefits for the community, including economic development, improved quality of life, reduced environmental impact, increased resilience, and enhanced social cohesion.
